## **The Principles of Fruit-Growing (The Rural Science Series) L. H. Bailey**

Fruit-GROWING and pomology are synonymous terms. They comprise the whole art of raising fruits and fruit-trees, and the applications of the various sciences thereto. It is impossible to define what a fruit is, in the sense in which the term is universally understood in pomological writings. It is best delimited by giving a list of those products which are commonly known as fruits. If a definition were attempted of the use of the word in its pomological application, it would be approximately correct to say that a fruit is the edible product of a woody or a tree-like plant, - as of a tree, bush, or vine, - and which is intimately associated in its development with the flower. This conception of a fruit is wholly unlike the botanical idea, for the botanist defines the fruit to be the ripened pericarp and attachments.
