Primates, Pathogens, and Evolution: 38 (Developments in Primatology: Progress and Prospects)

Primates, Pathogens, and Evolution: 38 (Developments in Primatology: Progress and Prospects)

The immune systems of human and non-human primates have diverged over time, such that some species differ considerably in their susceptibility, symptoms, and survival of particular infectious diseases. Variation in primate immunity is such that major human pathogens - such as immunodeficiency viruses, herpesviruses and malaria-inducing species of *Plasmodium* - elicit striking differences in immune response between closely related species and within primate populations. These differences in immunity are the outcome of complex evolutionary processes that include interactions between the host, its pathogens and symbiont/commensal organisms. The success of some pathogens in establishing persistent infections in humans and other primates has been determined not just by the molecular evolution of the pathogen and its interactions with the host, but also by the evolution of primate behavior and ecology, microflora, immune factors and the evolution of other biological systems.

To explore how interactions between primates and their pathogens have shaped their mutual molecular evolution, *Primates, Pathogens and Evolution* brings together research that explores comparative primate immune function, the emergence of major and neglected primate diseases, primate-microorganism molecular interactions, and related topics. This book will be of interest to anyone curious as to why infectious diseases manifest differently in humans and their closest relatives. It will be of particular interest to scholars specializing in human and non-human primate evolution, epidemiology and immunology, and disease ecology. *Primates, Pathogens and Evolution* offers an overview and discussion of current findings on differences in the molecular mechanics of primate immune response, as well as on pathogen-mediated primate evolution and human and non-human primate health.

From reader reviews:

Patrice Gasaway:

Book is to be different for each and every grade. Book for children right up until adult are different content. As it is known to us that book is very important usually. The book Primates, Pathogens, and Evolution: 38 (Developments in Primatology: Progress and Prospects) ended up being making you to know about other understanding and of course you can take more information. It is very advantages for you. The reserve Primates, Pathogens, and Evolution: 38 (Developments in Primatology: Progress and Prospects) is not only giving you far more new information but also for being your friend when you really feel bored. You can spend your own personal spend time to read your reserve. Try to make relationship using the book Primates, Pathogens, and Evolution: 38 (Developments in Primatology: Progress and Prospects). You never truly feel lose out for everything in case you read some books.

Hannah Norton:

Do you one of people who can't read enjoyable if the sentence chained in the straightway, hold on guys this specific aren't like that. This Primates, Pathogens, and Evolution: 38 (Developments in Primatology: Progress and Prospects) book is readable by you who hate those perfect word style. You will find the data here are arrange for enjoyable studying experience without leaving possibly decrease the knowledge that want to supply to you. The writer involving Primates, Pathogens, and Evolution: 38 (Developments in Primatology: Progress and Prospects) content conveys prospect easily to understand by many people. The printed and e-book are not different in the content material but it just different as it. So , do you continue to thinking Primates, Pathogens, and Evolution: 38 (Developments in Primatology: Progress and Prospects) is not loveable to be your top listing reading book?

Deborah Walker:

Is it an individual who having spare time then spend it whole day by means of watching television programs or just laying on the bed? Do you need something new? This Primates, Pathogens, and Evolution: 38 (Developments in Primatology: Progress and Prospects) can be the solution, oh how comes? It's a book you know. You are so out of date, spending your free time by reading in this completely new era is common not a nerd activity. So what these publications have than the others?

Fred Nelson:

That publication can make you to feel relax. That book Primates, Pathogens, and Evolution: 38 (Developments in Primatology: Progress and Prospects) was bright colored and of course has pictures on there. As we know that book Primates, Pathogens, and Evolution: 38 (Developments in Primatology: Progress and Prospects) has many kinds or style. Start from kids until adolescents. For example Naruto or Private investigator Conan you can read and think you are the character on there. Therefore not at all of book are usually make you bored, any it makes you feel happy, fun and chill out. Try to choose the best book for

yourself and try to like reading that.
