One Legacy of Paul F. Brandwein: Creating Scientists: 2 (Classics in Science Education) Deborah C. Fort

Once again, our nation has a powerful need for a revolution devoted to creating scientists. As we face the challenges of climate change, global competitiveness, biodiversity loss, energy needs, and dwindling food supplies, we find ourselves in a period where both scientific literacy and the pool of next-generation scientists are dwindling. To solve these complex issues and maintain our own national security, we have to rebuild a national ethos based on sound science education for all, from which a new generation of scientists will emerge. The challenge is how to create this transformation. Those shaping national policy today, in 2009, need look no further than what worked a half-century ago.

In 1957, Sputnik circled and sent a clarion call for America to become the world's most technologically advanced nation. In 1958, Congress passed the National Defense Education Act, which focused the national will and called for scholars and teachers to successfully educate our youth in science, math, and engineering. It was during this time period that Paul F. Brandwein emerged as a national science education leader to lay the foundation for the changes needed in American education to create the future scientists essential to the nation's well-being.
